

## **Recommendations for Blending Basecoat**

It is recommended that all metallic, solid, and pearl basecoat colors be blended into the adjacent panel to achieve the perception of a perfect color match. At times, tinting and blending may be required to achieve a blendable solution. There are many things that can affect the way a color appears between the time it is mixed and the time it is applied to the vehicle. The temperature range, amount of reducer added, the air pressure used to apply, as well as the application technique can all change the appearance of the color. This makes blending the best way to help ensure customer satisfaction.

Axalta Coating Systems offers products with approved and specified repair processes that are together designed specifically for automotive refinishing. It is critical to the quality of the repair to use the recommended products following the approved processes outlined in Axalta's Technical Data Sheets.

Please visit the Axalta Coating Systems website for full details regarding warranted systems and their related procedures. In the event there are additional questions or additional information needs, please do not hesitate to contact your local Axalta Coatings Systems representative or call us at +1-855-6-AXALTA (1-855-629-2582).
